Relevant Experience

Software Developer **Vancouver, BC, Canada**
UBC Emerging Media Lab *Sept. 2024 – Present*

- Leading a team in the development of a VR application using Unreal Engine to enhance nursing education, focusing on interactive clinical simulations and AI technologies.
- Reduced backend infrastructure costs by 90% through optimization of the AI system on the DXL server.
- Developing a secondary AI layer to monitor and re-prompt AI responses, aiming to improve system robustness, increase scalability, and reduce development time.
- Driving prompt engineering efforts to enhance the reliability and efficiency of AI-based outputs.

Software Engineer **Maryland, USA**
Faaz Consulting *May – Sept. 2023*

- Led the development of client applications in Java and Python, improving UI responsiveness by 30%.
- Enhanced legacy systems with new UI features using Vue.js and JavaScript, increasing user engagement by 15%.
- Automated DevOps processes with Jenkins and Docker, reducing deployment times by 20%.
- Delivered software enhancements for enterprise clients, adhering to strict deadlines and project specifications.

Relevant Technical Projects

Amazon Marketplace Analytic Software **Academic/Personal Project**
Sept. – Dec. 2022

- Engineered an Amazon Marketplace tool, enhancing seller operational efficiency by 35%.
- Implemented an algorithm predicting ASIN trends, leading to a 50% reduction in overstock.
- Enabled multi-format data integration, including SQL and JSON, improving data retrieval times by 40%.

High-Performance Media Distribution Platform **Personal Project**
Jan. – April 2021

- Orchestrated Ombi-integrated media server, automating over 1,000 weekly metadata-rich downloads using scripting.
- Administered NGINX server streaming a 50 TB digital Blu-ray archive to 150+ users, ensuring optimal system reliability.
- Enhanced system resilience and reduced downtime by 90% with SSH-powered Raspberry Pi commands.

Research

Entropy Comparison in Random Generators **Research Project**
Sept. – Dec. 2020

- Conducted a comprehensive analysis comparing the entropy levels of true-random vs. pseudo-random number generators, utilizing mathematical algorithms and hardware-based phenomena.
- Developed and executed tests in Java, C++, and Swift, measuring performance and entropy using TRNGs (True-Random Number Generators) and PRNGs (Pseudo-Random Number Generators).
- Demonstrated TRNGs' superiority for cryptographic purposes, resulting in more secure and unpredictable sequences compared to PRNGs.
- Published results in a detailed research paper, contributing to the understanding of secure random number generation.

Skills

Languages: Java, Python, JavaScript, SQL, C/C++, Swift | **Frameworks:** Node.js, Vue.js, React.js
Tools: Git, Docker, OracleDB, MySQL, NGINX | **API and Integration:** API Integration, System Administration, SQL
Testing: Unit, Integration, End-to-End, Smoke, A/B

Education

The University of British Columbia *(BSc in Computer Science - Expected Graduation: 2026)* **Vancouver, BC**
